

Alliance Engineering awarded compressor station expansion project from Gulfstream Natural Gas System, L.L.C.

HOUSTON, January 12, 2010 – Wood Group’s Alliance Engineering has been awarded a contract to provide engineering, design and procurement support services for the expansion of Compressor Station 420, which is part of the Gulfstream Natural Gas System in Florida. The expansion at the existing compressor station includes a gas turbine-driven compressor unit, a compressor building extension, pipeline and process connections, and utility systems as necessary for the operation of the new compressor unit. Installation of the new compressor unit at the existing facility is scheduled to be completed in 2011.

Alliance President Edmund Lunde stated: “This project will allow us to apply our fit-for-purpose compressor station design expertise to another compressor station on the Gulfstream Natural Gas System, which in turn will allow Gulfstream to increase pipeline capacity while maximizing facility operating efficiencies. We look forward to be working with the Gulfstream team to successfully complete the development.”

Notes to Editors

Alliance Engineering provides highly optimized concept-to-completion custom engineering solutions for the oil and gas industry. The world’s biggest oil and gas projects demand talent, expertise, and innovation. Some of the largest and most visible projects in the world compose Alliance’s impressive offshore and onshore project portfolio. With an emphasis on quality initiatives and cost-effective engineering, Alliance has been on the cutting edge of engineering services for all customers worldwide. Alliance offers unique services and expertise for three energy market segments:

Deepwater, Shelf / FPSO, and Onshore, with offices in Houston and Denver, CO.
